PROFILE SUMMARY

Computer Science student at the University of Peshawar with a CGPA of 3.94/4, specialising in AI development, backend engineering, and cybersecurity. With 3 years of hands-on experience as a Blue Cape Cyber Expert, I bring a strong foundation in threat analysis, binary logic, and secure system operations. My technical focus spans Python, C++, Object-Oriented Programming, and Machine Learning fundamentals, driven by a passion for building intelligent, scalable, and logically sound systems. I aim to bridge the gap between academic rigour and real-world application — contributing to AI-driven solutions and cyber-resilient software that makes a meaningful impact.

EDUCATION

Bachelor of Science in Computer Science

2025 – Present

University of Peshawar, Peshawar, Pakistan

- Current CGPA: 3.94 / 4.00 — consistently top-ranked in cohort
- Core coursework: Data Structures & Algorithms, Object-Oriented Programming, Discrete Mathematics, Computer Networks.
- Independent study: Artificial Intelligence, Machine Learning, Cybersecurity Fundamentals

WORK EXPERIENCE

Blue Hat Cyber Expert

2022 – Present (4 Years)

Blue Hat Cyber Operations · Peshawar, Pakistan

- Performed end-to-end cybersecurity operations including threat identification, binary logic analysis, and system vulnerability assessment using CLI-based security tools.
- Developed and maintained terminal-based utility scripts in Python and C++ for log parsing, binary inspection, and automated threat response workflows.
- Applied OOP design principles to build modular, maintainable security tools capable of processing large datasets and real-time system events.
- Conducted in-depth analysis of file systems, DOS-level operations, and low-level command-line environments to identify anomalous behaviour and potential attack vectors.
- Maintained consistent security operations documentation and contributed to internal knowledge bases on emerging cyber threats and countermeasures.

TECHNICAL SKILLS

Programming

Python · C++

Core Concepts

OOP · DSA · Logic Building · Problem Solving · Algorithm Design

AI & ML

AI Concepts · Machine Learning Basics · Python for AI · Data Analysis

Cybersecurity

Blue Cape Cyber Operations · Binary Logic · Threat Analysis · CLI Security Tools · File Systems · DOS Concepts

Developer Tools

GitHub · Git CLI · VS Code · Terminal ·

Systems

Binary Logic · File Systems · Low-Level Operations · CLI Operations

Soft Skills

Analytical Thinking · Self-Learning · Technical Communication · Problem Decomposition

KEY PROJECTS

Binary-Based Cyber Tool

C++ · Terminal · Binary Logic · CLI

- Terminal-based cybersecurity utility demonstrating binary logic, CLI argument parsing, and low-level system operations. Focused on secure input handling and modular command architecture.

C++ OOP Mini Game Engine

C++ · OOP · Classes · Inheritance

- Text-based game built entirely with object-oriented design — showcasing class hierarchies, state management, polymorphism, and clean separation of concerns.

AI Mini Application

Python · ML · Scikit-learn · Data

- Beginner-to-intermediate intelligent application exploring ML concepts — data preprocessing, model training, prediction logic, and structured output formatting.
